

FOOD FROM HOME

Presented By

◆ Deepali Vyas

◆ Mohd Hammad

Introduction

- ◆ The project **FOOD FROM HOME - Tiffin Ordering System** is a web-based application that allows the administrator to handle all the activities online quickly and safely. Using Interactive GUI anyone can quickly learn to use the complete system.
- ◆ The project aims to provide food services to the customers who find it difficult to curb their hunger in a tight budget. As we know that the food cooked at home is hygienic and best for health. The food prepared at home is cheaper too and keeps the doctors far away and makes us healthy.

Technology Used

We used Java Spring-Boot as backend and React JS as Frontend in our Project.

Spring-Boot :-

The main goal of the **Spring Boot** framework is to reduce overall development time and increase efficiency. React has become the first choice for frontend because it gives developers the ability to work with a virtual browser (more friendly than the real browser). Also, a JavaScript developer can become a productive developer in a few hours because there is a small API to learn, a few functions, and how to use them.

React :-

React allows developers to create large web applications that can change data, without reloading the page. The main purpose of **React** is to be fast, scalable, and simple.

User Classes

Admin:-

The super user, admin class represents complete authority over the system.
An admin can,

- ◆ Add or remove the customers on system
- ◆ Add or remove the homemakers on system
- ◆ Handle the queries and give solutions to all the queries which are coming from users/customers/homemakers
- ◆ Keep track of all the orders of all the users.

Customer:

Once customer has registered in this system he/she can,

- ◆ Select the package which he's willing to choose
- ◆ Choose the desired homemaker
- ◆ Add his additional information
- ◆ Choose the food package and desired homemaker which he wants to select
- ◆ Choosing the payment mode (UPI/Credit-Debit CARD/Pay on Delivery) and pay according to that
- ◆ Cancel the order if he/she wants to, also he/she can get refund for the same if he/she has paid for that
- ◆ Ask queries if he/she is facing any issues

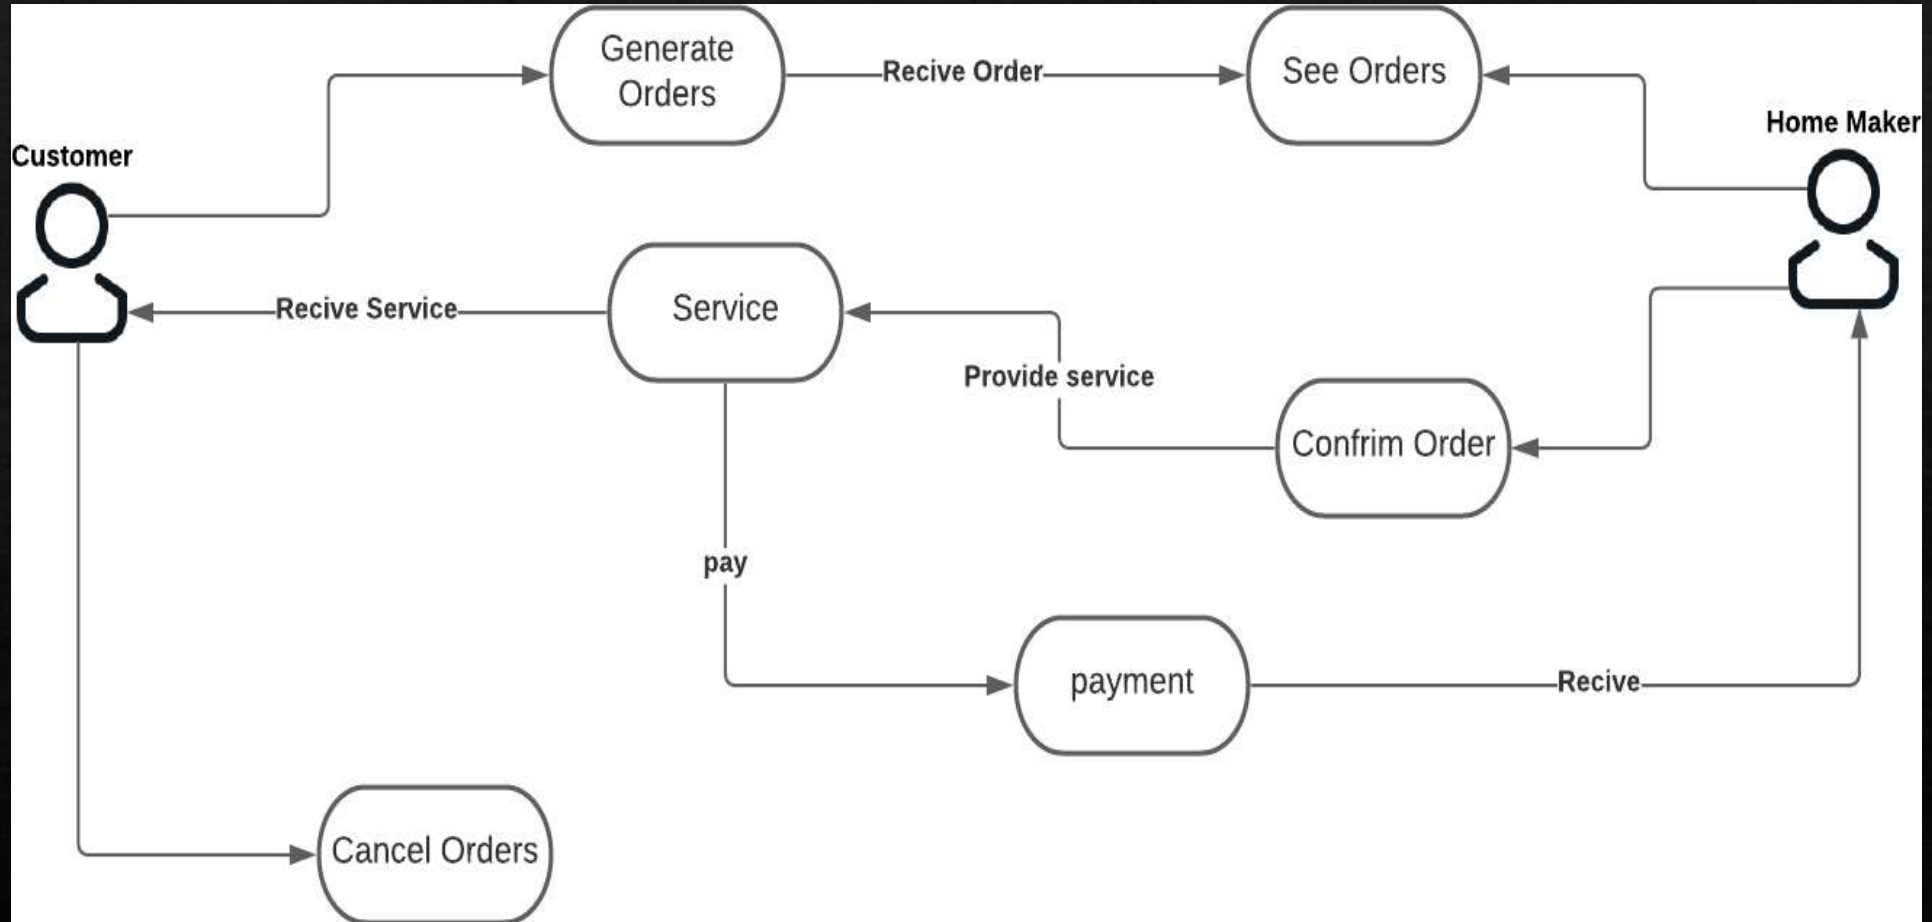

HomeMaker:

- ◆ Once homemaker has registered in this system, he/she can
- ◆ see the customers
- ◆ see the orders
- ◆ Handle the queries and give solutions to all the queries which are coming from admin
- ◆ Keep track of all the orders of their respective customer

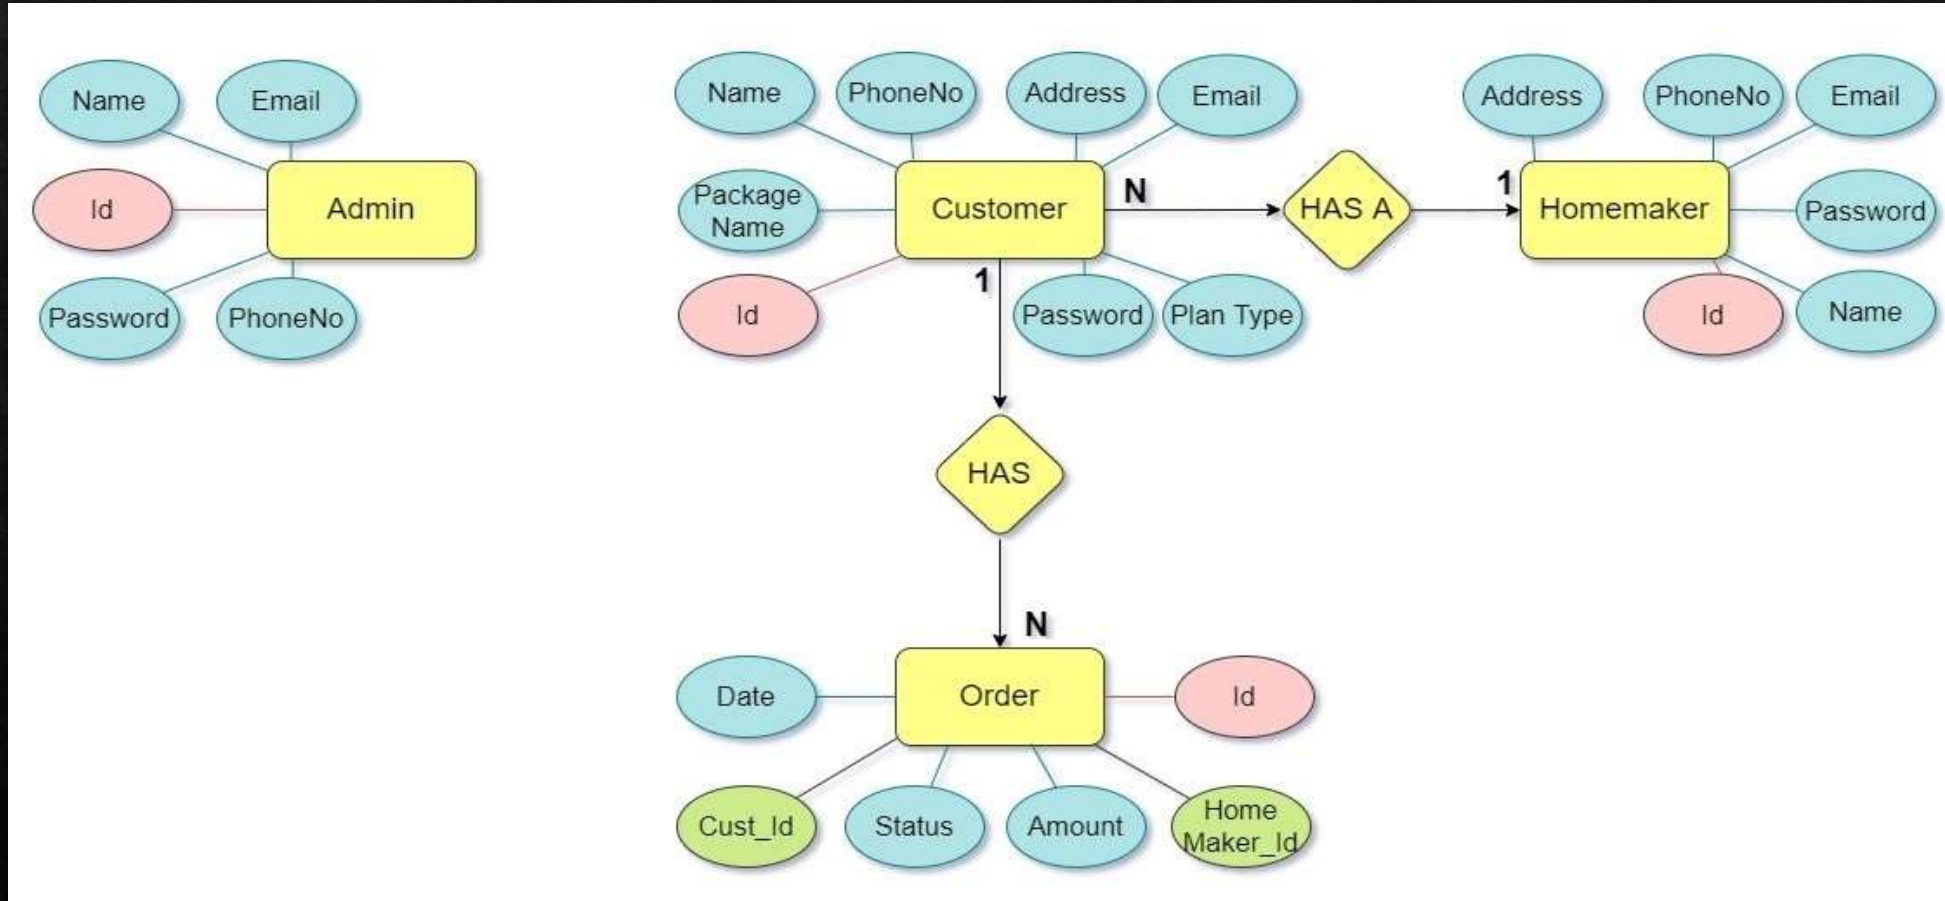

Product Features

- ◆ The main feature of this system is the user can search for the particular food-package he wants and particular home-maker as well. The user must be a registered one before he orders a package. The user can change/cancel the order as per his need. The system shows the details of that package, payment amount and it's summary after selecting the package and all the items user wants to see. There are 3 types of food-packages Mini package, Classic Package and Jumbo Package. User can see all his/her order history and all his/her homemakers in this system. Also, if user has any queries or is facing any issue, he can ask for help from About Us/Contact Us section.
- ◆ In admin part, he/she can add or remove the Homemakers and Customers in the system. Admin can give the solutions to the user queries and keep track of all the orders of all users.

About us page

-: ABOUT US :-

The purpose of our application is to create a platform which provides an opportunity to the local-area homemakers to start their own Tiffin Services to ensure that the people can satisfy their hunger within budget. The users of our web-application require to create an account as a customer to avail Tiffin Services based on the availability of the Homemaker in their respective locality. Customers can navigate through different categories of food items as per their choice. A payment functionality is there to allow the use of credit cards, debit cards or COD for customers.
